

PRINTING FROM WINDOWS NT/2000 SPOOLER SYSTEM.

These instructions require you to edit the registry.

CAUTION: We strongly recommend that you back up the system registry before you make any changes. Incorrect changes to the registry could result in permanent data loss or corrupted files. Please make sure that you modify only the keys that are specified. In Windows 2000, the Emergency Repair Disk does not contain a backup of the registry. To backup the registry, use the Windows 2000 Backup utility. The Windows 2000 Backup utility makes a backup of the registry and other system files.

After making changes to the registry

After making changes to the registry, immediately verify that the results are what you expected.

If the results are not what you expected and you want to restore the registry to its previous state, restore the System State backup.

For more information, see the article [Rdisk.exe Is Not Included With Windows 2000](http://support.microsoft.com/support) in the Microsoft Knowledge Base at: <http://support.microsoft.com/support>.

Do a Find for the following key,

HKEY_LOCAL_MACHINE\SYSTEM\CurrentControlSet\Control\WOWLPT_timeout

The current default value is 15 seconds. Set the value to 2. This will speed up the printing of the receipt printer.
